

# The FAB Master Pallet (MP)

**FAB**<sup>®</sup>

Air Cargo Systeme

## ULD Handling with fork-lifts

### The FAB Master Pallet

The FAB Master Pallet (MP) is a patented development of FAB GmbH, designed for transporting and handling ULDs. For the first time ever, the MP enables a quick, efficient and safe handling of containers and pallets with a size of up to 10ft and a weight of up to 6.8t with a standard fork-lift.

### Areas of utilization

- Controlled, time-efficient loading and unloading of airfreight trucks and dollies
- Internal transport of ULDs
- Replacement of Transfer Vehicles (TV)
- Mechanized loading and unloading of ULDs in warehouses
- Hand-over or connection unit to stationary systems

### The Team: The FAB MP and a fork-lift

Drive rollers, which are integrated in the MP and controllable from the fork lift, enable a mechanized hand-over and movement of ULDs. The drive system is connected to the fork lift via quick connectors. Therefore, no changes are required at the fork-lift – the MP can be directly used with any standard 10t fork-lift.

The low height of the MP enables a smooth hand-over on dollies, trucks, stationary systems and slave pallets.
